Professional Summary

Senior Backend Engineer with 9+ years of experience building scalable fintech and Web3 platforms using Node.js, NestJS, and TypeScript. Deep expertise in microservices architecture, AWS cloud infrastructure, PostgreSQL/MySQL, and event-driven systems with Kafka, Redis, and RabbitMQ. Proven track record delivering high-performance platforms handling thousands of concurrent transactions. Additional background in Solana smart contracts and Web3 applications.

Skills

Languages:	Node.js, JavaScript, TypeScript, PHP
Frameworks & Backend:	Express.js, NestJS, gRPC, REST APIs, Microservices
Infrastructure & DevOps:	Docker, Kubernetes Fundamentals, Pods, ConfigMaps, AWS ECS/ECR/EC2, CI/CD Pipelines
Messaging & Caching:	Redis, Kafka, RabbitMQ
Databases:	MySQL, PostgreSQL, MongoDB
Frontend (exploratory):	React.js, TypeScript, TailwindCSS
Blockchain(Additional):	Solana, Anchor, Web3.js, Metaplex, Token Program, Fireblocks (Wallet/Custody Integration)

Work History

Antier Solutions

Sep 2020 – Present

Senior Web Developer

- Led backend development for fintech/DeFi platforms handling thousands of daily financial transactions using Node.js, TypeScript, and Web3 technologies.
- Designed and implemented RESTful API gateway services in Node.js/Express.js with JWT-based authentication, rate limiting, and request routing — improving API response time by 30%.
- Implemented gRPC-based inter-service communication, reducing internal service latency by 25%.
- Integrated gaming platforms with NFT ecosystems using Kafka, RabbitMQ, and Redis for real-time event processing and messaging.
- Developed NFT applications with minting, trading, and ownership tracking functionalities on blockchain networks.
- Operated a cluster of 3-4 containerized microservices on Kubernetes (EKS) — managing ConfigMaps, restarting pods, and scaling replicas via YAML manifests to support production troubleshooting.
- Optimized PostgreSQL/MySQL database schemas and query performance alongside Redis caching, reducing server load by 35% under concurrent traffic.
- Mentored 3-5 junior developers through code reviews, pair programming, and system design discussions, strengthening engineering practices and knowledge sharing across the team.

WebSpero Solutions

Sep 2018 – Sep 2020

Senior Web Developer

- Developed WordPress plugins and Node.js backend systems, deployed on AWS and DigitalOcean using Docker workflows.
- Built secure APIs for communication between plugins and backend infrastructure.
- Managed backend architecture and third-party API integrations for multiple projects.
- Implemented centralized logging, monitoring, and error-handling mechanisms, reducing production issue resolution time by 30%.

- Built client websites and a contractor registration/verification platform for Tata Housing using PHP, JavaScript, HTML, and CSS.

Recent Projects

Landbitt Platform

- Led backend architecture for Landbitt, a blockchain-powered real estate platform, designing scalable gRPC-based microservices.
- Integrated Fireblocks for wallet and custody management — handling transaction initiation, webhook-based status tracking, and wallet balance reconciliation for digital asset transfers.
- Implemented Redis caching and optimized order management workflows to improve platform performance.
- Built real-time WebSocket features and RESTful APIs using Node.js, Express.js/NestJS, and Sequelize (PostgreSQL ORM) to improve responsiveness and transaction tracking.

Digithread

- Led backend development for Digithread, a production-grade Web3 staking platform serving 4,000+ active users.
- Designed and implemented scalable microservices architecture using Node.js, GraphQL, Docker, and AWS infrastructure.
- Built on-chain transaction ingestion systems, multi-level referral tree management, and automated reward distribution modules.
- Managed deployment workflows and backend architecture decisions across cross-team collaboration.

Microservices API Gateway

- Built centralized API Gateway for routing, authentication, caching, and rate limiting.
- Improved maintainability and scalability across distributed services.

Finora — Personal Finance Platform (Side project)

- Built a full-stack personal finance platform with NestJS, PostgreSQL, and Prisma on the backend, using Redis for caching and Docker for containerization.
- Developed the frontend using React and TypeScript, exploring AI-assisted development workflows (Google Antigravity) to accelerate delivery.

Education

Bachelor of Science in Information Technology
Kuvempu University, Karnataka

2010 – 2013

Solana Builders Cohort
Turbin3
